**Fires Reported in FireRMS**

**November 17 2017, 6:53 PM-** T-12 responded as part of a full response on a possible fire in a kitchen. Dispatch advised flames from the top of the oven in this residence. B-11 arrived first and assigned T-12 to investigate. T-12 made contact with the occupant who stated they had attempted to run the self-clean cycle on the oven and flames were visible from the burner. They discharged a water extinguisher but were unable to open the oven due to the locking function of the self-clean cycle. We assessed the appliance and surrounding area. We made sure there was no extension to the walls or surrounding cabinets. We were able to open the oven and allow it to cool. It did not appear to be seriously damaged. I contacted the property owner and explained the situation. I also left a message with FI Stover and will follow up with an email. After advising command of the situation, we were able to clear all other units. T-12 remained on scene for a short time to advise the residents. T-12 clear.

**Training Reported in FireRMS**
