Fires Reported in FireRMS

June 1, 2019, 1:36 PM- Dispatched to a car fire. Arrived and found one car on fire, WB Saginaw lane 2 just east of intersection. ELPD was blocking traffic from both directions. Hood was up and heavy flames coming from engine compartment. Passenger area full of black smoke. Used front jump line to extinguish fire in engine compartment. Used hand tools to remove windshield and roll dash up. More fire under dash. Extinguished fire. Used 200 gallons water. H & H on scene to tow car. ELPD will be giving occupant a ride home. No fluid leaks noticed.

June 1, 2018, 4:53 PM- On a previous call for mutual aid to MTFD, Command sent to a car fire in Okemos. Arrived and found B11 on scene. Found a minivan, with a cargo trailer, in the road with the owner using a garden hose to put water in the engine compartment. He stated the van was off when it caught fire. Unknown reason why fire started. We used about 100 gallons of tank water and used the front jump line to completely extinguish the fire. Removed some melted plastic engine parts and covered burning parts with water. MTPD on scene. Left scene to MTPD.

June 5, 2018, 10:02 PM- Called to possible structure fire. ATF the occupant meet us outside stating his dryer was on fire, but he put it out with an extinguisher. We went to laundry area to investigate, and found a 10 lb dry chemical extinguisher, spent, on floor near dryer, and large amount of chemical throughout the room. TIC found no heat signature, and only signs of fire was to the back of the dryer itself. The electric dryer had tripped the breaker and fire was contained to housing. We removed the dryer to driveway, and found the venting had significant amount of lint, but was also wet enough to pour water out of the vent hose...

We showed homeowner the issues he had going on, and he agreed to have a handy man inspect the cause of water, the venting itself, and electrical components as well, before installing the next dryer.

Obtained contact info prior to clearing the scene and returning to Fire Main channel

June 11, 2018, 11:56 AM- E-11 responded for a mulch fire. Employees extinguished the fire with a dry chemical extinguisher just before our arrival. We flooded the area with water to

ensure the fire would not reignite. The fire was contained to the mulch to the left of the main entrance. This report requires an estimate of total acreage burned. I chose 0.01 as it will not let me select an appropriate value.

Training Reported in FireRMS

June 5, 2018, 3.50 hours – Search and Rescue- Metro Lansing RIT training
